300-Watt Module

About This Manual

This manual provides information for the HP 60502A 300-Watt Electronic Load Module. It is designed as a supplement to the the HP 6050A/6051A Multiple Input Electronic Load Operating Manual (part number 06050-90001). Four tables provide the following module-specific information:

Table 60502-1 provides detailed specifications.

Table 60502-2 lists the ranges that can be programmed in constant current, constant resistance, and constant voltage modes. It shows the maximum and minimum programming values for each range. Refer to this table when programming the module locally as described in chapter 4, or remotely as described in chapter 5 of the operating manual.

Table 60502-3 gives the factory default values of the module. Unless you have saved your own wake-up settings, the module will be set to the factory default values whenever power is applied. See chapter 4 in the operating manual.

Table 60502-4 provides calibration information for the module. This information is needed to perform the annual calibration procedure described in chapter 6 of the operating manual.

Module Installation and Operation

Except for the module-specific information in this manual, all installation, operation, and calibration instructions are given in the Electronic Load Operating Manual. The HP Electronic Load Family Programming Reference Manual (part number 06060-90005) contains complete programming details that apply to all Electronic Load models.

Note	The following information in chapter 2 of the Electronic Load Operating Manual does not apply to electronic load modules with the serial numbers listed on the title page of this manual: The section titled "Extended Power Operation", and the section titled "Extended Power Limit". Also for these modules, change the 3-second delay referred to under "Nominal Power Limit" to 50 milliseconds.
